

Glyph Usage Tracking

This example demonstrates character tracking for font subsetting

Limited Character Set:

Hello World

Hello World

Hello World

This example only uses these characters:

H, e, l, o, W, r, d (7 unique characters)

With subsetting, only these 7 glyphs would be embedded
instead of all ~2000+ glyphs in the full font.

Potential file size reduction: ~99.5%

(Note: Full subsetting not yet implemented, but tracking works)
