Font Subsetting - Summary

What is Font Subsetting?

Font subsetting only embeds the glyphs (characters) actually used in the document, rather than the entire font file.

Benefits:

- Dramatically smaller file sizes (70-99% reduction)
- Faster downloads and emails
- Better performance in PDF viewers
- Automatic with PDFStudio

When to use subsetting:

- Invoices and receipts (few characters)
- Reports and forms (repetitive text)
- Email attachments (size matters)

Usage:

```
doc.registerFont({
  name: "Arial",
  source: "./arial.ttf",
  subset: true  // Enable subsetting!
})
```
